

The extension work regards a large hotel structure. The extension is on four levels, three of which are below ground level. At roof level, in the central area of the building, a glass cupola has been inserted to attract zenithal light and underneath a panoramic lift has been introduced to connect the four levels.

On the lowest level no sort of covering has been foreseen, mainly as it is an open floor. Other light sources, made from loom structures with ample large windows, can be found in correspondence with the vertical connections between the various levels. The roof level is principally made up from a floor covering from which it is possible to see some of the areas of the underground level below.

The lower level will be principally used as a health spa with an ample solarium that will contain a Jacuzzi surrounded by curved walls. A gymnasium, a VIP gym, an office and hygiene and sanitary services have also been planned on this level. Externally some rooms have been created for the health spa and hotel structure services.

The flooring for the area facing the tub is made from wood for external spaces whilst the rest of the flooring is made from a treadable grassy surface.

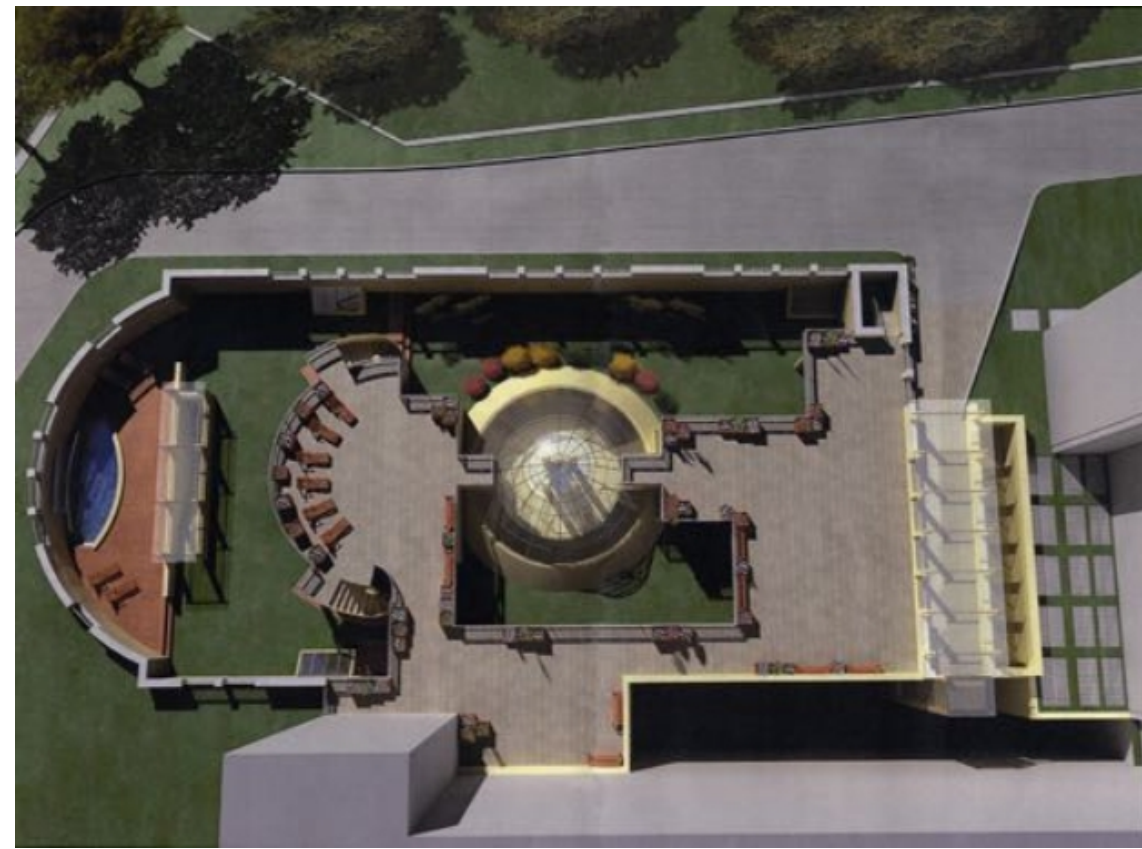

The other level has been reserved for the reception and the other lower level has been divided into three distinct areas: the water zone, the treatment zone and the hall of the health spa.

WORK CARRIED OUT
concept, design development, construction documents

PROGRAM
renovation of building and extension works; SPA and fitness centre.

PROJECT
SD Partners

Quark hotel milan 2005-2010

PROJECT SITE
via Lampedusa, Milan

CLIENT
ATA Hotels

COST
6.000.000,00 euros

GROSS FLOOR AREA
3.000 sqm

STATUS
built, 2005-2010
