

LAVAZZA RESEARCH AND PRODUCTION CENTER  
Project

WORK

Verres, Italy

Developed along the Dora river and permeated by its energy, the project provides a "Research and Production Park" contained within a new pavilion in the image of ice blocks that evoke the glacial origin of Valle d'Aosta. From an architectural point of view, facade system is characterized by the use of wood to protect the productive space and to interact with the brick walls of the old halls. Plants and nature have the function to accompany, emphasize and combine the various elements of this landscape.

in collaboration with: Aedas Ltd, D. Chiaruttini, G. Pairone and  
M. Palmisano, M. Marrano, G. Bono
