STATION BUILDING 2422,20 M2

Works contract amount
EURO 3.240.832,76

The project for the renovation of Bergamo station was developed according to the objectives of the Client: Centostazioni S.p.A. These changes will help to improve the quantity and quality of services for passengers and thus increase attendance, livability and security. In the functional reorganization draft, the new hall wrapped in its glass volume will appear as a space with high permeability to both the city and railway functions. Total Area of the Entrance domain is of 2,422.2 m², the project includes:

- The relocation of the ticket desk in the East area of the passenger building;
- The construction of a main hall and a central atrium at the service of the new ticketing area;
- the introduction of new access systems to pedestrian underpass, through connecting stairs and a panoramic elevator, from the ground floor to the station and the south side of the city;
- the introduction of a new glass gallery along the North side of the station building, with distribution function of the flow between two halls and providing way-out to the station ground;
- relocation of the buildings devoted as secondary services for travelers;
- the introduction of new ancillary services to travelers;
- relocation with complete reconfiguration of the offices of the Railway Police and sanitation facilities in the auxiliary services building;
- inclusion in the building of the new ancillary services of Cofely and Trenord;
- the creation of new technical areas in the passenger building and the building auxiliary services (Milan side).
